EXISTING COMPOSITE STEEL BEAM & HEAVY TIMBER RETAINING WALL

POINT LOMA HIGH SCHOOL - PROPOSED STADIUM IMPROVEMENTS (CONCEPTUAL PLAN)

Additional Clarification of Point Loma High School Stadium Improvements Site Plan

At this point in time the site plan is a conceptual site plan; therefore, there may be revisions to the plan prior to the release of the Draft EIR.

The site plan depicts the entire school campus and divides the site into the following categories existing buildings, buildings in construction, proposed stadium improvements, existing fields, proposed practice field, and existing parking spaces. The following provides a description for each of these categories:

Existing Buildings:

As depicted in yellow on the site, these are existing buildings on the campus would not be upgraded and are not included in the proposed project.

Buildings in Construction:

As depicted in orange on the site plan, a restroom/concession building is currently under construction adjacent to Voltaire Street, which is anticipated to be completed in June 2013.

Proposed Stadium Improvements (Blue):

The proposed stadium improvements depicted in blue includes the following:

Visitor side of the field (north side)

- Proposed visitor entry gate ramp;
- Proposed visitor restrooms/concessions building;
- Proposed 500 seat aluminum bleacher system on the visitor side of the field;

Home side of the field (south side)

- Proposed elevator for ADA access;
- Proposed “image screen” wall – this is not an illuminated screen. It is proposed to be something similar to a painted mural to cover the backside of the existing Home bleachers;
- Proposed press box and upgraded PA system; and,
- Proposed upgrade to the existing concrete bleachers, no increase in the seating capacity for the home bleachers. Seating capacity will remain at 2,000.

Field Improvements:

- Four lights poles are proposed to provide stadium lighting. Two poles will be located on the southern side of the stadium and the other two light poles will be located on the northern side of the stadium. The proposed location of the poles is depicted as small red dots on the site plan – Alternative being reviewed is a 6-pole system with a lower pole height.

Existing Fields

As depicted in light green on the site plan, the following existing fields will not be upgraded or improved as part of this project:

- Softball field;
- Existing natural turf practice field; and,
- Existing artificial turf field (football/soccer).

Proposed Practice Field

As depicted in dark green on the site plan, the proposed project will include the demolition of the existing basketball courts and install a new practice field in the same location.

Existing Parking Spaces -

Existing parking spaces to remain as is. The parking areas as depicted in brown on the site plan would not be upgraded or improved. There are two lots depicted on the site plan that accommodate 148 parking stalls.
